

Whitchurch Primary School

Science Intent

At Whitchurch, our intent is for the children to access the key knowledge and skills set out in the National Curriculum as part of a broader scientific curriculum.

Our aim is for children to have the curiosity and confidence to investigate their questions and understand more about the world they live in.

We want the children to understand the importance of Science in their everyday lives. We want all children to learn about a range of scientists and to have great female and male role models of excellence in the scientific field. If they want to, we want them to feel confident enough to continue to study science and technology at secondary/college/university.

Our curriculum is planned to cover a wide range of investigation and practical work to give them opportunities to develop their understanding and test their own ideas.
